

E-resources Usage Stats Made Easy.

CELUS is an online tool for harvesting and analysis of e-resources usage statistics used by libraries all over the world. As an active member of Project COUNTER, CELUS will always be compatible with the newest COUNTER format.

SUSHI automated harvesting status

Result of download for each automatically harvested report. [Details here](#)

Why choose Celus?

Designed and built together with the community. A COUNTER and non-COUNTER usage statistics reporting tool you really want to work with. Finally. Focus on what your statistics mean, not on how to piece them together.

Speed!

That's our superpower! First-time users are always amazed by how fast Celus is.

All Stats In One Place

COUNTER 5, COUNTER 4, and non-COUNTER data supported.

Effortless SUSHI Management

Automated data harvesting and full history of your usage statistics.

Powerful Reporting

Create custom reports, export to Excel, update charts with ease.

Celus in a nutshell

Celus "superpowers" include:

- ✓ COUNTER 5 and COUNTER 4 support
- ✓ Custom non-COUNTER formats
- ✓ Manual uploads of historical usage data
- ✓ Automated data harvesting
- ✓ Effortless SUSHI management
- ✓ Cost-per-use analysis
- ✓ **ACRL IPEDS report in one click**
- ✓ Advanced reporting and exports
- ✓ Identification of overlapping subscriptions
- ✓ Year-to-year usage comparison
- ✓ Fast and powerful data analytics
- ✓ No setup, no installation

Celus is an online tool for automated harvesting and analysis of COUNTER and non-COUNTER statistics. It is a powerful yet simple and affordable solution for single libraries, library consortia, and others, including publishers.

Celus was developed in cooperation with CzechELib, the Czech national consortium of academic libraries, with approx. 130 member institutions with an annual e-resources budget of \$50M for e-resources.

ConsortiaManager is a globally used e-resources management (ERM) workflow tool for managing subscriptions, contracts, invoicing, price negotiations and now—thanks to integration with Celus—combining prices with usage data to clearly see if your investments in e-resources are translating into use by your community.

Seamless integration with ConsortiaManager for in-depth price-per-use analyses

Celus features a cost analysis module where you can insert platform level pricing, enabling you to view price per search or price per full-text information, with the ability to also add weights to the metrics to make cost analyses more accurate.

Not enough for you? If you are looking for in-depth cost analysis for a particular platform (including at the title level), want to comprehend the history of your purchases comparing them to current usage and trends, you might want to try our latest integration with

Not enough for you? If you are looking for in-depth cost analysis for a particular platform (including at the title level), want to comprehend the history of your purchases comparing them to current usage and trends, you might want to try our latest integration with [ConsortiaManager](#).

Ensuring compatibility with future COUNTER releases

It goes without saying that since we aim to be the #1 tool for analyzing e-resources usage stats, we need to be active members of COUNTER's [Technical Advisory Group](#). We are participating in the development of the COUNTER Code of Practice itself, which makes us aware of any upcoming changes to the COUNTER format well in advance. Thanks to that, we can make sure Celus will be always compatible with the latest COUNTER releases.
